EDUCATION

Auburn University, Auburn, AL
Honors College – Bachelor of Computer Science Dec 2027
Cumulative GPA: 3.59 / 4.0

WORK EXPERIENCE

UDA Technologies, Auburn, AL August 2026 – Present
CO-OP Development Team Member

- Utilized JavaScript and CSS to write over 500 lines of code for a new Email Tracking feature on the ConstructionOnline website.
- Resolved bugs in the live ConstructionOnline codebase using Git and Asana, fixing issues that affected hundreds of users.

Auburn University Program Understanding Lab, Auburn, AL May 2026 – August 2026
Undergraduate Researcher

- Updated a set of 60+ malicious software excerpts in partnership with Sandia National Labs to test AI agents' ability to detect malicious binary code.
- Modified the samples in C++ and validated results across 250+ tests in an AI evaluation pipeline.
- Analyzed test results and wrote a report for Sandia National Labs on our findings for the 4 obfuscation techniques used to update the binaries.

SKILLS

Programming: C++, Python, Java, SQL, MATLAB, JavaScript
Technical: Excel, Wireshark, Oracle VirtualBox (Virtual Machines), Git, Linux Systems

LEADERSHIP AND ACTIVITIES

DOE "Cyberforce" Ethical Hacking Event/Training – *Team Captain* September 2025 – November 2025
AU Ethical Hacking Club – *Active Officer & Web Master* May 2026 – Present
AU Small Satellite Program – *Former Embedded Systems Member* August 2024 – May 2024

RELEVANT PROJECTS

Department of Energy's "Cyberforce" Live Hacking Competition, Auburn, AL
September 2025 – November 2025
Team Captain

- Led a team of 6 students in defending a simulated network of 6 machines against cybersecurity professionals over two days, placing 25th of 100 teams (top 25%).
- Hardened the provided machines, remedying 20+ security flaws and exposed vulnerabilities.
- Organized weekly practice materials, sessions, and notes, reinforcing cybersecurity and IT concepts such as network protocols and virtualization.

Department of Energy's "Cyberfire" Capture the Flag Competition, Auburn, AL August 2025
Group Team Member

- Solved encryption problems with Linux command line tools such as Hashcat and John the Ripper (2000+ points) and wrote Python and Excel programs to analyze CSV files (1000+ points).
- Used provided ciphers and algorithms to encode and decode data, earning enough points to place our team in 12th place out of 24 teams.
